

Broadcast radio, in many cases and in many locations, provides very limited options. Many areas do not have stations that broadcast materials to which I want to listen. Most stations, furthermore, are commercial and force the listener to endure endless commercials during a listening session. Satellite radio requires me to subscribe and, in return, provides me with a large number of choices that appeal to my taste, and do not include commercials. Please do not let the NAB interfere with a good service.

Thanks for listening,
